tPolls - Incentivized Polls on TON

Turning feedback into rewards. Poll smarter. Earn more.

Abstract

tPolls is a decentralized polling platform built as a Telegram MiniApp on TON. It solves feedback fatigue by rewarding participants with tokens, making polls engaging and valuable for communities, brands, and DAOs.

The Problem

Low Engagement in Polls:

Response rates in traditional surveys often fall below 10%[1], and even official government surveys have dropped to 12.7%[2].

Lack of Trust and Transparency:

Centralized platforms control data and results. Users don't own their contributions.

No Built-in Incentives:

Current platforms (Telegram, Discord, Web2 poll tools) have no built-in way to reward participants[3].

The Solution

How tPolls Works:

1. Create Polls - Simple Telegram MiniApp flow

2. Engage & Reward - Responders instantly receive tokens

3. Trust - Results stored transparently on-chain

Key Benefits:

- Incentives boost engagement

- Decentralized and trustless

- Communities can easily reward members

Key Features

- Poll creation from Telegram

- Token rewards for responders

- Gamification: badges, missions, leaderboards

- Fully on-chain (TON Smart Contracts)

- Community-driven DAO governance (future)

Tokenomics

Utility:

- Poll creation

- Reward distribution

- Governance (future DAO)

Distribution:

- Poll creators fund rewards

- tPolls native token introduced for advanced features

Use Cases

- Communities: Clubs, groups, forums

- DAOs: Token-weighted voting

- Brands: Market research

- Events: Quick and fun engagement

Roadmap

- 2025 Q3: Beta Release (TON MiniApp)

- 2025 Q4: Gamification + Rewards

- 2026 Q1: DAO Governance + Poll Marketplace

- 2026+: AI-generated polls, cross-chain expansion
